## Homework 4

due March 1, 2003, before 22:00

Normal questions and advanced questions (A) are worth 5 points; easy questions (E) are worth 4 points. Complete either the easy, or the advanced version, not both.

1. Consider the vector space of functions that is spanned by the basis

$$B = \{\sin x, \cos x, \sin 2x, \cos 2x\}.$$

Find the matrix representing the derivative operator with respect to the basis  $B$ .

2. Recall the definitions of range and kernel of a linear map  $A$  on the vector space  $\mathbb{R}^n$ :

$$\text{Range } A = \{A\mathbf{x} : \mathbf{x} \in \mathbb{R}^n\}$$

$$\text{Ker } A = \{\mathbf{x} \in \mathbb{R}^n : A\mathbf{x} = 0\}$$

(E) Let

$$A = \begin{pmatrix} -1 & 2 & -2 \\ 1 & 2 & 6 \\ 0 & 1 & 1 \end{pmatrix}$$

Find a basis for  $\text{Range } A$  and for  $\text{Ker } A$ .

(A) Prove that  $\dim \text{Ker } A + \dim \text{Range } A = n$ .

3. Let

$$A = \begin{pmatrix} 2 & 0 & 2 \\ 0 & 2 & 0 \\ -2 & 0 & 2 \end{pmatrix}$$

represent a linear transformation on  $\mathbb{R}^3$  with respect to the standard basis  $\{\mathbf{e}_1, \mathbf{e}_2, \mathbf{e}_3\}$ . Find the matrix  $A'$  which represents this transformation with respect to the new basis

$$\mathbf{e}'_1 = \begin{pmatrix} 0 \\ 1 \\ 1 \end{pmatrix}, \quad \mathbf{e}'_2 = \begin{pmatrix} 1 \\ 0 \\ 1 \end{pmatrix}, \quad \mathbf{e}'_3 = \begin{pmatrix} 1 \\ 1 \\ 0 \end{pmatrix}.$$

4. Compute the determinant

$$\begin{vmatrix} 1 & 2 & 0 & 0 \\ 1 & 1 & 0 & 0 \\ 0 & 0 & 7 & 3 \\ 0 & 0 & 1 & 1 \end{vmatrix}.$$

5. (E) Use the determinant to test if the matrix

$$A = \begin{pmatrix} 2 & -1 & 0 \\ -1 & 2 & -1 \\ 1 & -1 & 1 \end{pmatrix}$$

represents an invertible linear transformation.

- (A) Use the definition of the determinant to show that a matrix  $A$  is invertible if and only if and only if  $\det A \neq 0$ .
6. Show that a matrix  $A$  is invertible if and only if all the eigenvalues of  $A$  are nonzero. (Recall that  $\lambda$  is an eigenvalue of  $A$  and  $\mathbf{v}$  is the corresponding eigenvector if  $A\mathbf{v} = \lambda\mathbf{v}$ .)
